Medipure Ireland Ltd provides bio-burden test kits for flexible and rigid scopes that are:

- Quick and Easy to perform
- Cost-effective
- Reliable

Medipure Ireland Ltd offers **free on-site training**, when a minimum amount of 10 bio-burden kits are ordered.

Test Includes:

- Sterile Brush
- Sterile Universal
- Processing
- Final Report

Residual Bio-burden Test for Endoscopes.

After its use, endoscopes present a microbial load that should be effectively removed by the AER (Automatic Endoscope Re-processor) in order to make it safe to be used in other patients.

Periodical testing of AER's can guarantee that the machines are functioning within manufacturer's specifications and therefore performing cleaning cycles adequately. However, testing the channels or the insertion tube in an endoscope will give a real indication of the effectiveness of the cleaning/disinfecting process.

At Medipure Ireland Ltd we provide sterile endoscope brush kits to test the channels of all types of endoscopes for residual bio-burden. Once tested, they are returned to our laboratory for processing and a final report will be issued.

A comprehensive system of infection control should be established, implemented and maintained within endoscopy departments and theatres.
